

OAK TREE

All year through the mighty Oak Tree gives food and shelter to the creatures that call it home. It is a haven for over 2,300 wildlife species.

In the spring the oak bursts into life with fresh green leaves which have a distinctive shape.

In the summer, green acorns appear which contain the seed that may grow into an Oak Tree.

In the autumn., the leaves turn gold and brown before falling to the ground.

In winter the tree is bare .

Oak Trees play a super important part of the ecosystem, and we need to protect them!
